- C** Solid
- Hg** Liquid
- H** Gas
- Rf** Unknown

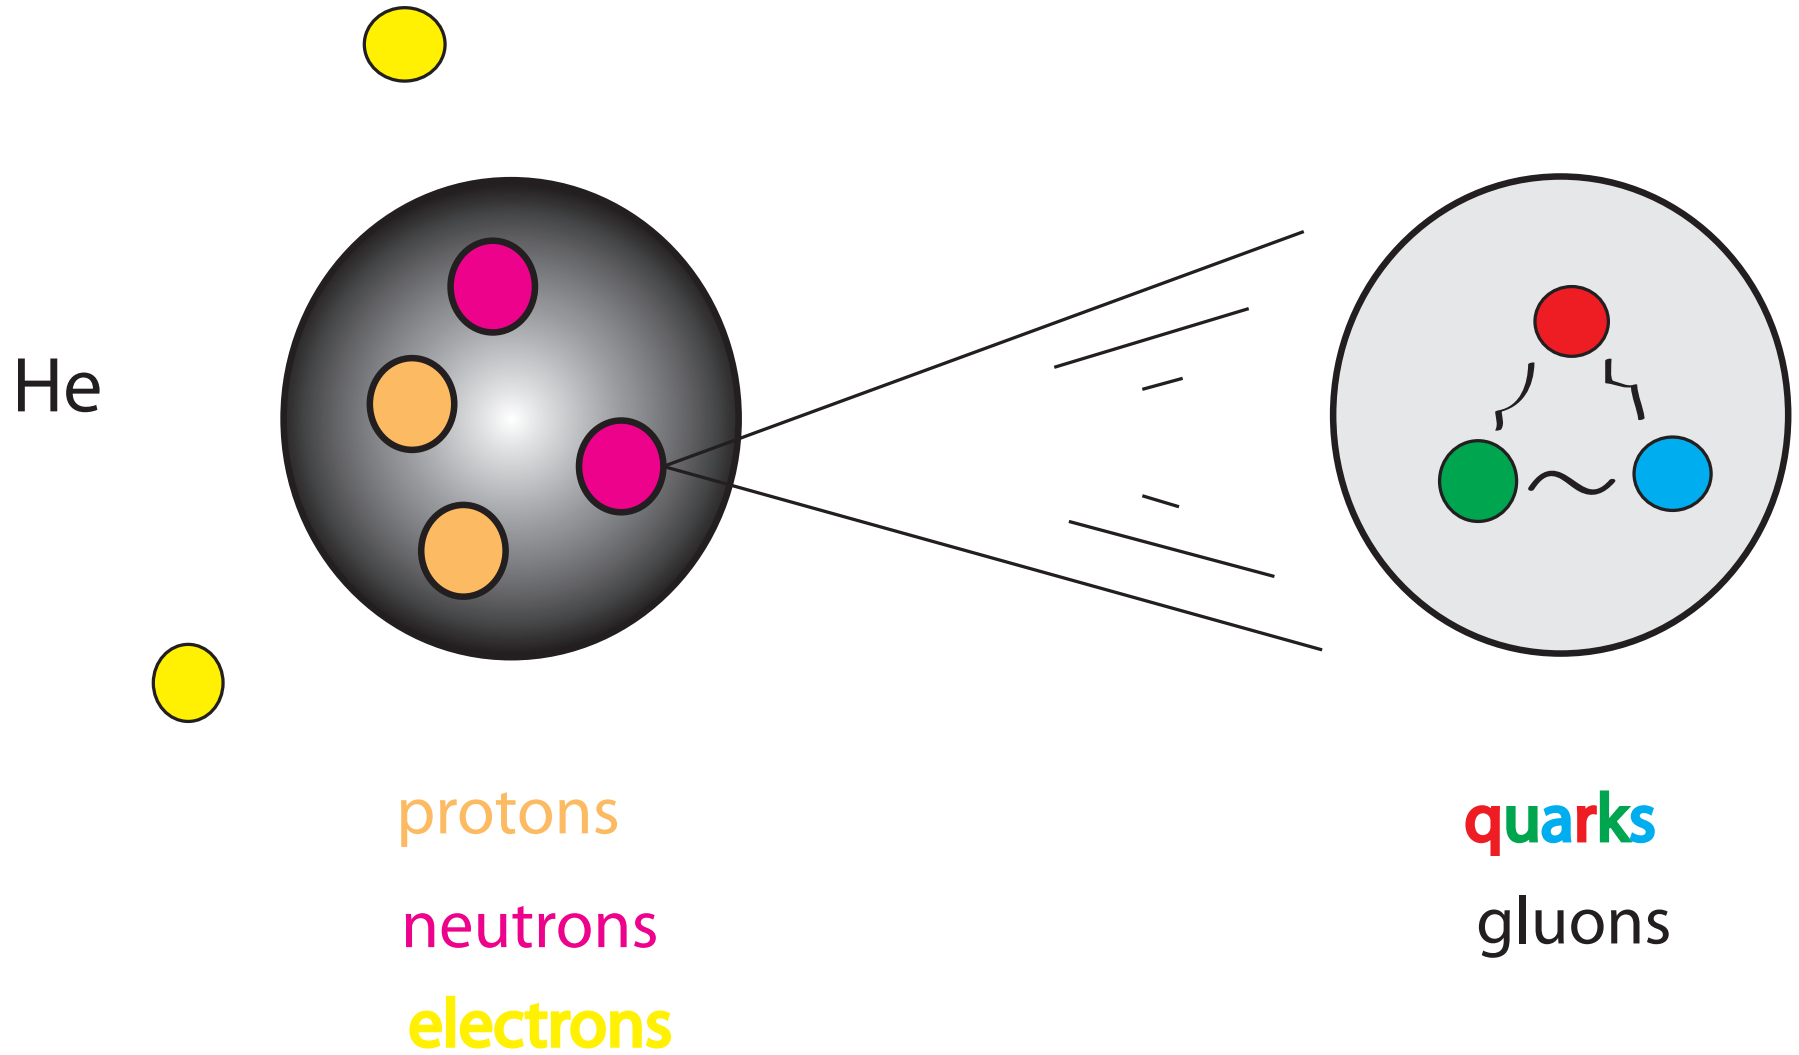

For elements with no stable isotopes, the mass number of the isotope with the longest half-life is in parentheses.

$E=mc^2$ & quantum theory

Einstein

Schrödinger

Heisenberg

Energy can be converted into mass and thus into new particles

LEP and LHC at CERN Switzerland

	I	II	III	
mass →	2.4 MeV/c ²	1.27 GeV/c ²	171.2 GeV/c ²	0
charge →	2/3	2/3	2/3	0
spin →	1/2	1/2	1/2	1
name →	u up	c charm	t top	γ photon
Quarks	4.8 MeV/c ²	104 MeV/c ²	4.2 GeV/c ²	0
	-1/3	-1/3	-1/3	0
	1/2	1/2	1/2	1
	d down	s strange	b bottom	g gluon
Leptons	<2.2 eV/c ²	<0.17 MeV/c ²	<15.5 MeV/c ²	91.2 GeV/c ²
	0	0	0	0
	1/2	1/2	1/2	1
	ν_e electron neutrino	ν_μ muon neutrino	ν_τ tau neutrino	Z⁰ Z boson
	0.511 MeV/c ²	105.7 MeV/c ²	1.777 GeV/c ²	80.4 GeV/c ²
	-1	-1	-1	±1
	1/2	1/2	1/2	1
	e electron	μ muon	τ tau	W[±] W boson
				Gauge Bosons

Pattern of masses

$$M_u \sim 0.002$$

$$M_c \sim 1.3$$

$$M_t \sim 170$$

$$M_{\nu_e} < 2 \times 10^{-9}$$

$$M_{\nu_\mu} < 10^{-10}$$

$$M_{\nu_\tau} < 0.01$$

$$M_d \sim 0.004$$

$$M_s \sim 0.1$$

$$M_b \sim 4$$

$$M_e \sim 0.0004$$

$$M_\mu \sim 0.1$$

$$M_\tau \sim 1.9$$

$$M_W \sim 85$$

$$M_Z \sim 95$$

in units of the proton mass (approximately one Atomic Unit)

The pattern of masses appears pretty random, and is **not** understood.

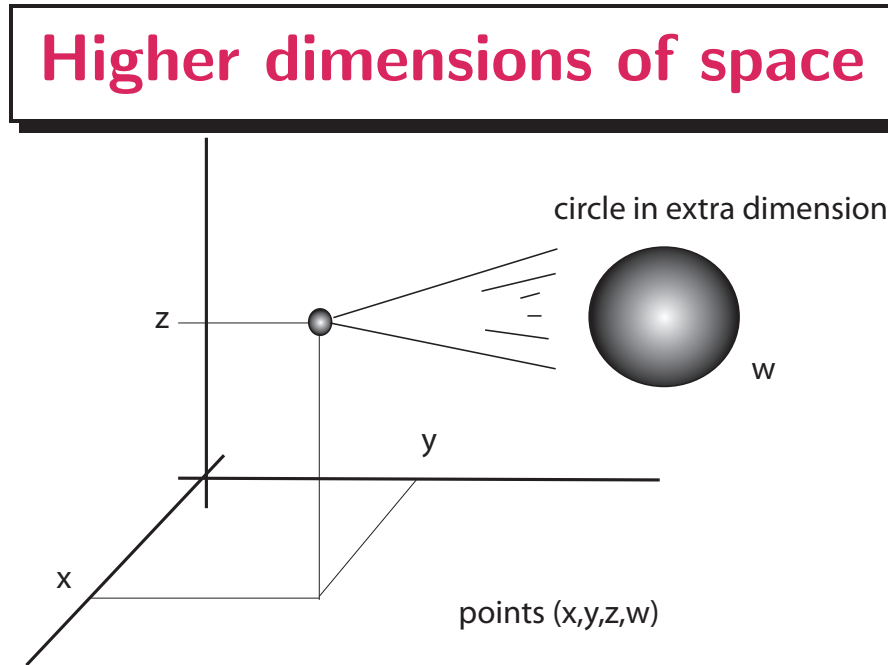

The work of a theoretical physicist

- quarks, electrons and neutrinos could be themselves composite
theorists have tried for decades, this option looks hopeless
- discovery of the Higgs particle would advance us, but only slightly
- supersymmetry
- extra space dimensions
- string theory

EUCLID — GAUSS — RIEMANN — EINSTEIN

- **EUCLID** : Flat, planar geometry
- **GAUSS** : Is 3-dimensional physical space flat or curved ?
- **RIEMANN** : The geometry of a space can change
- **EINSTEIN** : The geometry of space-time is determined by mass/energy

- If the circle is tiny tiny, it might have escaped detection.
- To detect small circles, you need very high frequency light
(or high energy particles)
- Whether extra dimensions exist in Nature is an *experimental question*

String Theory

- View elementary particles as strings instead of as point-like particles

Each vibrational mode would correspond to a specific particle species

- Strings require 9 space-dimensions !
- Strings unify all four forces of Nature
 - gravity, electro-magnetic, strong force, weak force
- Did we solve the problem of quark/lepton masses NO
- But we learned a lot of other very interesting things !

THANK YOU
